ISO 639 language identifiers "scr" and "scc"

With reference to your request to the ISO 639-2 Registration Authority the ISO 639 Registration Authorities' Joint Advisory Committee has decided to deprecate the alpha-3 identifiers "scr" and "scc" (used in the "B column" of ISO 639-2), leaving "hrv" and "srp" the only recommended ISO 639 alpha-3 language identifiers for Croatian and Serbian respectively (the alpha-2 identifiers "hr" and "sr" are not affected by the decision).

Data already encoded using "scr" and "scc" are still valid, and these deprecated identifiers will not be assigned a different value in the future.

Yours sincerely

for ISO 639 RAs-JAC,

Håvard Hjulstad
